Leah F. Vosko, Canada Research Chair in the Political Economy of Gender & Work, York University

Precarious Employment in Liberal Market Economies: Lessons for the U.S. Post-Secondary Education Sector
Questions

- What do we need to know about the nature and extent of precarious employment and its drivers in liberal market economies (LMEs) to understand its shape in post-secondary education in the US?

- What are the most promising principles upon which to base proposals for improving job quality in this sector?
Outline

- Core concepts
- Contours of precarious employment in the LMEs of Canada, the EU 15, and Australia vs. the U.S.
- Precarious employment in U.S. post-secondary education
- Principles and policy options for mitigating precarious employment in post-secondary education in the U.S.: Lessons from elsewhere
Core concepts

- **PRECARIOUS EMPLOYMENT:**
  Forms of work for remuneration characterized by dimensions of labour market insecurity (e.g., uncertainty, low income, and limited social benefits and statutory entitlements) (Vosko 2000 & 2006)

- **SER:**
  Normative model of employment defined by a full time continuous employment relationship where the worker has one employer, works under direct supervision, and has access to a social wage (Mückenberger 1989; Deakin 1998; Bosch 2004)
Core concepts

- **GENDER CONTRACT:** Social, legal, and political practices surrounding exchanges between breadwinning and care-giving

- **CITIZENSHIP:** Correspondence between membership in a community and territory (i.e., a nation state)
Why are these concepts so important?

- Across LMEs, the SER has been dominant normatively, serving as a reference point in identifying dimensions of labour market (in)security

- Yet the means through which the SER has been institutionalized have differed among LMEs, affecting its shape and thus the forms precarious employment takes

Results:

- Form of the SER in “the rest” (Canada, the EU 15 and Australia): full-time permanent employment (institutionalized by labour laws, legislation, and policies backed by collective bargaining)

- Form of the SER in the U.S.: full-time ongoing employment in a unionized domain (cemented by collective bargaining backed by labour laws, legislation, and policies)

The Degraded SER:

- employment at-will
- declining union membership
- stagnation of wages
- high prevalence of low wage work
- deficiencies in employer-provided social wage benefits

Precarious Employment in Post-secondary Education in the U.S: Echoes of other LMEs?

- Dramatic increase in the share of faculty described as “contingent” who are neither employed in tenured nor tenure-track positions

- More and more employment in this sector closely resembles acutely precarious forms of employment in Canada, the EU 15, and Australia

- The situation of “contingent” faculty is akin to fixed-term temporary employees in Canada and the EU 15 and part-time casual employees in Australia

Faculty Employment Status, by Gender, 2011 (Fall)

Principles

- **Parity**: crafting protections attentive to the diverse needs and situations of workers in different forms of employment rather than prorated to the illusive comparator of the full-time permanent employee

- **Inclusivity**: providing pathways of entry into the community of workers covered by, and able to access, the full range of employment and labour protections required for the meaningful exercise of labour market membership
Applying Principles to Alleviate Contingency in U.S. Post-secondary Education

- Strengthening tenure (e.g., by providing more direct lines to this status and thereby preserving job quality)
- Increasing certainty and security among contingent faculty, including via conversion to the tenure stream
York University’s Conversion Program

- Allows for part-time faculty who have five-years experience of high intensity teaching to be placed in a “priority pool” of candidates, from which they are eligible for appointment by academic units to either standard tenure track positions or “alternative stream” but tenure-eligible teaching positions.

- Recognizes “the substantial contribution to the University community made by long-term employees... and... the obstacles that have faced these employees in their attempts to find academic employment” (CUPE 3903 Collective Agreement, Article 23).
Conclusion

- Create accessible modes of representation for post-secondary educators (ideally routes to unionization) regardless of their form of employment.

- Embrace these modes of representation in the struggle against a degraded SER and associated inequities across post-secondary education (e.g., gender inequities).
